Tough and hard spruce sawn timber

The spruce Koskisen uses grows in the best spruce growth zones in the world. This ensures excellent properties to our sawn timber from the very beginning. Our spruce sawn timber is typically dense, has sound knots and uniform quality.

Easily workable spruce

Spruce is a slowly growing and straight coniferous tree with dense branches. The wood is yellowish white with no clear difference in heartwood and sapwood. Growth rings are clearly visible in the wood. Spruce is dense and hard and therefore an excellent material for load-bearing structures and exterior linings. Spruce is easily workable and its properties make it suitable for indoor as well as outdoor use. The density of the wood usually varies from 370 kg/m³ to 450 kg/m³ (Mc 12-15%).

Uniformly high quality

A log is processed into sawn timber through our modern production chain, whose functionality is ensured by our very experienced and skilled staff and state-of-the-art technology. We renew our production process of sawn timber continuously in order to produce products that fit our customers' needs as efficiently as possible.

Additional information

Environment

Our raw material, wood is an ecological and renewable material and it stores carbon during its whole life cycle. Koskisen sawn timber products are manufactured in Finland according to the strictest sustainability principles. Koskisen is a pioneer in the Finnish forest industry in paying attention to the environment and the wood's supply chain is always known in detail. Finnish forests are primarily privately owned and the owners are guided by a strong commitment to long-term forestry and forest cultivation. Yearly, Finnish forests grow more than they are harvested. This guarantees a sustainable and environmentally sound raw material.

Additional information

Wood is a living material and every piece of timber is unique. Therefore a photograph or a sample piece cannot represent a full sized panel as regards colours, shades, figure, knots etc. Please note that a slight colour variation is accepted between products.
